SUMMARY

AI & Data Science engineering student building production-ready AI systems, RAG applications, and scalable web applications. Architected and built a **real-time AI voice assistant platform** from scratch during a **software internship**, achieving **~1.3-second end-to-end response latency**.

EXPERIENCE

Product Developer Intern – AI & Software, PlatinumOne Business Services Limited

June 2026 to July 2026

- Tackled laggy, unnatural-feeling calls by engineering the **end-to-end real-time voice loop** in React and FastAPI, covering microphone capture, end-of-turn detection, streaming STT, LLM generation, and TTS; streamed each stage for early playback, reducing **latency from ~20 seconds to ~1.3 seconds** while preserving natural conversational turn-taking.
- Fixed context loss across multi-turn conversations by engineering **session-level conversation state** with turn recovery, and **prevented hallucinated responses** through an **end-to-end RAG pipeline** with per-turn semantic retrieval; added **explicit objection handling** so the assistant acknowledged unsupported questions instead of fabricating answers.
- Prepared the system for production use by designing secure REST APIs, **authentication and access control**, usage controls, and resilient error handling in FastAPI and PostgreSQL, improving reliability while protecting against misuse.
- Reduced production failures with **AI guardrails and automatic human handoff** for out-of-scope queries, fallback handling for provider timeouts and dropped connections, and deployment and integration documentation for system maintenance.

EDUCATION

Vivekanand Education Society's Institute of Technology (VESIT), Mumbai

2025 to 2029

B.E. in Artificial Intelligence & Data Science, **CGPA: 9.96 / 10.00**

Smt. Sulochanadevi Singhania School, Thane

Completed 2025

H.S.C. (ISC Board), **Percentage: 97.25%**

PROJECTS

Domain-Agnostic AI Voice Assistant Platform

June 2026 to July 2026

React, Vite, Tailwind CSS, Python, FastAPI, PostgreSQL, Docker, LLM, STT, TTS

- Designed and built a **configurable, multilingual, domain-agnostic AI voice platform** where new voice assistants are created through a **no-code builder** by uploading scripts and knowledge bases, configuring personas, voices, AI providers, and languages, eliminating code changes for new business use cases.
- Engineered an **LLM-powered script extraction pipeline** that converts raw sales scripts into structured conversational flows, objections, FAQs, checkpoints, and business rules, enabling rapid onboarding of new domains without manual prompt engineering.
- Resolved **real-time audio pipeline** issues causing dropped speech by correcting sample-rate mismatches, simplifying the streaming pipeline, and optimizing speech processing to improve conversational reliability.
- Built a comprehensive **management console** with conversation testing, transcript review, provider configuration, voice tuning, analytics dashboards, and an **automated QA test suite** for evaluating AI voice agents before deployment.

SEOOptimiz — Deterministic Website SEO & Quality Analyzer | [Live App](#)

August 2026

Next.js, Typescript, Tailwind CSS, Vercel

- Replaced conventional SEO audits with **deterministic scoring** by engineering a TypeScript rule engine that evaluates **60+ measurable website signals across 6 pillars** — SEO, Responsiveness, Accessibility, Structure, Trust, and Conversion — producing consistent, reproducible results without LLM-based scoring.
- Turned a **10-second website scan into an actionable audit** by building signal-level diagnostics that surface evidence, explain the impact of each issue, and prioritize fixes based on the underlying website condition.
- Built and deployed a **zero-account website analyzer** that accepts a URL, automatically performs website analysis and technology detection, and presents overall and pillar-level results with detailed findings and a **downloadable PDF audit report**.

SKILLS

Languages & Frameworks: Java, Python, JavaScript, TypeScript, SQL, HTML, CSS, React, Vite, Tailwind CSS, FastAPI

AI & Voice: LLM: Gemini, OpenAI, Claude, Groq; RAG Pipelines, Speech-to-Text, Text-to-Speech & Real-Time Audio Processing

Data & Infra: PostgreSQL, SQLite, Docker, REST APIs, Git, GitHub, Vercel
